COMMENTS FROM THE COMMISSIONER

"AGRICULTURE - KENTUCKY'S PRIDE"

I am proud to be your Commissioner of Agriculture for Kentucky. My farm roots go deep, and we are still farm folks from western Kentucky. This is my first year as Commissioner, and my goal is to make things better for the Kentucky farmer. My administration is looking at some new programs in the areas of international marketing, hay grading, etc.; and also strengthening the brucellosis and regulatory areas of this department.

This "Kentucky Agricultural Statistics" publication is a summary of the production generated by 99,000 Kentucky farmers. I am pleased to have a part in presenting these agriculture numbers. There is great interest in these State numbers, as well as the county information. Agri-business wants to pinpoint heaviest areas of production. We appreciate our cooperative working agreement with the Kentucky Agricultural Statistics Service. They prepared the data into a readable and easy-to-use informational tool.

The information for this booklet was provided by farmers, county extension agents, auction markets, elevators, dairy plants and other segments of the agricultural community voluntarily reporting the facts and figures on their crops and animals to the Kentucky Agricultural Statistics Service. Without their first-hand observations and reports, this publication would not be the accurate and valuable index of Kentucky agriculture for which it has gained its solid reputation.

Agriculture is a vast industry within the Commonwealth. From Ashland to Fulton, agricultural problems vary, but we are working toward a better tomorrow for Kentucky agriculture.

Sincerely,

Butch

WARD 'BUTCH' BURNETTE
Commissioner
Kentucky Department of Agriculture

FOREWORD

"Trends in Agriculture" -- the charting of agricultural history. Kentucky has a long tradition in American Agriculture. National Agricultural Statistics is celebrating 125 years of collecting and disseminating agricultural numbers. Our name and symbol have changed several times, but the primary purpose of supplying accurate and timely agricultural numbers remains basically unchanged.

Throughout this 1987-88 edition of "Kentucky Agricultural Statistics" the history of agriculture is portrayed through graphic charting. These charts give a pictorial of the drastic changes in Kentucky agriculture from one decade to another. Farm numbers have dropped from 267,000 in 1940 to 99,000 in 1987 -- a drop of 63 percent. Makeup of these farms has changed even more as specialization has often replaced the homogeneous diversified farms of the previous generation. Commodities rise and fall and in some cases, new crops build from a minor commodity to a major enterprise. Corn is an old standby, but I was surprised to learn corn acres in the early 1900's tripled the acreage planted in 1988. These trend graphs are used throughout this publication and they are a pointed reminder of how many changes occur during the lifetime of a Kentucky farmer. Next year acreage or yield per acre charts will replace the production charts. Yield trends have been even greater than acreage changes for certain commodities.

Commissioner Ward "Butch" Burnette has been most supportive of this office. Kentucky Agricultural Statistics Service is

truly a State-Federal Agency. County estimates for many commodities are possible because of funding from the Kentucky Department of Agriculture. Publication of this bulletin is made possible by funds provided by Burnette's Department.

The Kentucky farmer is the most important link in the chain of agricultural numbers. The farmer is the largest contributor of information supplied through this publication. We thank him for these basic data. The farmer is also a primary user of agricultural statistics. He uses numbers from various sources such as Extension, farm magazines, etc; however, the original data usually came from the National Agricultural Statistics Service and is analyzed by various economists.

In closing, we present this publication with pride. Suggestions for improving the book are most welcome. Next year some of the county data from the 1987 Census of Agriculture should be available, adding considerable information at the county level.

Sincerely,

Dave Williamson

DAVID D. WILLIAMSON
Kentucky Agr'l Statistician

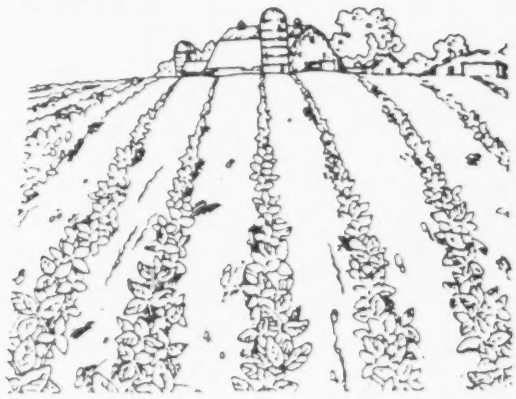
Fact Finding for Agriculture

CROPS

1987 CROP HIGHLIGHTS

HARVESTED CROP ACREAGE



During 1987 Kentucky farmers harvested 4.94 million acres of field crops and hay, a decrease of 4 percent from 1986 and 10 percent from 1985. With regard to the major crops produced in the State, corn, tobacco, and soybean acreage decreased, while wheat and hay acreage increased.

BURLEY TOBACCO

Kentucky farmers produced 287.0 million pounds of burley tobacco in 1987, unchanged from a year earlier. Harvested acres at 140,000 and yield at 2,050 pounds per acre are the same as 1986. The number one county in production for 1987 was Barren County with 8.22 million pounds, while Bourbon County with 8.00 million pounds was number two. Fayette, Shelby and Woodford Counties made up the remaining top five producing counties. Thirteen counties had burley production in excess of 5 million pounds.

Tobacco bed preparation and seeding got off to a near record pace in late March, but in early April germination and growth were slowed by snow and cold temperatures. Transplanting got underway in mid-May with plants in generally good condition. By late May burley transplanting was 71 percent complete, well ahead of the previous year's 36 percent. Plant supply was rated adequate. As setting was nearing completion in mid-June, dry soil moisture and temperatures above normal were stressing new transplants. This resulted in considerable resetting of tobacco in a number of counties. Condition of the crop in the field by late June was extremely variable, ranging from very poor to excellent with most in fair to good condition. There was also a great deal of divergence in growth and development depending on date planted and rainfall received.

General rain in July helped improve soil moisture and tobacco prospects. Even though tobacco experienced good growth, there were still problems with insects, black shank, and blue mold. By late July, crop development was rapid but continued highly variable.

Burley cutting started earlier than normal and was 20 percent complete by mid-August. Early planted tobacco was drying up in the fields due to hot, dry weather and farmers were cutting early to save the crop. Some early housed tobacco cured very rapidly as warm, dry conditions prevailed. Some tobacco dried out before curing. Late cut burley was generally small and of variable quality.

Stripping got underway in early October and continued slowly due to dry conditions which kept the tobacco from going into case. Overall quality was variable and producers were concerned about light leaf weight.

Burley markets opened November 23rd with a reduced supply of tobacco available due to delayed stripping. The 1987 burley tobacco price averaged $157.20 per hundred pounds, up 40 cents from 1986 but down $2.70 from 1985. The 1987 crop was valued at $451.2 million.

DARK TOBACCOS

The year 1987 was a record year for Kentucky grown dark tobaccos. Three dark tobacco types had record low harvested acreages and production. In contrast, two types set record high yields. Dark tobacco records have been kept in Kentucky since 1919.

Type 22, Eastern Dark Fire Cured tobacco production totaled 5.59 million pounds, down 36 percent from 1986 and the smallest production on record. Harvested acreage at 2,700 acres was also a record low. Yield averaged 2,070 pounds per acre, up 85 pounds from last year and the highest on record.

Type 23, Western Dark Fire Cured tobacco production declined to 6.37 million pounds, down 34 percent from last year and the smallest crop since 1980. Yield per acre was a record high 2,450 pounds, up 210 pounds from last year, while acres harvested at 2,600 was the smallest since 1974.

Type 35, One Sucker Dark Air Cured tobacco production at 3.69 million pounds was down 36 percent from the 1986 crop and the smallest on record. Acreage harvested at 1,900 was also a record low. Yield per acre at 1,940 pounds, was down 60 pounds from last year and the smallest since 1983.

Type 36, Green River Dark Air Cured tobacco production at 2.20 million pounds was down 42 percent from the 1986 crop and the lowest on record. It resulted from a 600 acre decline in harvested acreage to a record low 1,100 acres and a 220 pound decline in yield to 2,000 pounds per acre.

CORN

Corn for grain production by Kentucky farmers totaled 118.6 million bushels in 1987. This is a 15 percent decrease from the preceding year and the smallest crop since the drought year of 1983. Acreage harvested for grain at 1,140,000 acres is down 25 percent from 1986 and the smallest grain acreage since 1983. Yield per acre averaged 104 bushels, up 12 bushels from last year and the highest yield since records were started in 1866. Acreage cut for silage totaled 150,000 acres, down 40,000 acres from last year. Total planted corn acreage at 1,300,000 acres was down 25 percent from 1986. The 1987 corn for grain crop was valued at $231.2 million, down 2 percent from the 1986 crop. Price per bushel increased from $1.69 in 1986 to $1.95 in 1987.

Union County continues to be the leading corn county with 8.16 million bushels produced. Daviess County was number two with 7.12 million bushels, while Henderson County was third with 7.11 million bushels. Rounding out the top five production counties were Christian and Webster Counties.

Corn planting was slower this year and by mid-April was only 14 percent complete Statewide, ahead of the 12 percent for the 5-year average but well behind the 31 percent in 1986. Planting continued to trail last year and did not surpass the 1986 pace until late May. By the first week of June virtually all of the corn was planted and 90 percent of the acreage had emerged. Crop condition was rated fair to good but in need of rain. Weeds were causing a problem, especially on no-till acres.

As of July 5, corn was in the best condition of the State's major crops and by late July rapidly progressing toward maturity. By early September corn harvest had begun and was the earliest on record. Harvesting progressed quickly due to the lower than normal moisture content of the grain. This fast pace continued for the rest of the fall as little rainfall was received. Early planted corn had good to excellent yields, while later plantings were not as good.

SOYBEANS

Soybean production like corn was down in 1987. Kentucky farmers produced 24.0 million bushels of soybeans, down 33 percent from 1986 and the smallest crop since 1972. Harvested acreage was down 14 percent at 960,000 acres. Yield per acre was estimated at 25 bushels per acre, a decrease of 7 bushels from the previous year and the smallest yield since 1983. The soybean crop for 1987 was valued at $136.8 million, down 23 percent from a year earlier. Value per bushel increased from $4.97 in 1986 to $5.70 in 1987.

The State's leading soybean production county was Daviess with 1.86 million bushels. The number two county was Henderson with 1.73 million bushels, while Logan was number three with 1.50 million bushels. Union and Simpson were fourth and fifth respectively.

Planting of single crop soybeans got underway in early May. By June 7th planting Statewide was 68 percent complete, the most advanced for this date since 1977. Planting of double crop soybeans became active in mid-June as small grains were harvested and was virtually complete by July 12.

The crop saw rapid development and by August 2, 70 percent were blooming or beyond. During August short moisture supplies in many areas combined with high temperatures to stress soybeans, especially double crop beans. The dry late summer and fall were favorable for harvest. Soybean harvesting started in early September and by late September was well advanced. Few late beans were damaged by frost. Early beans produced good yields while size and yield of late double crop beans were reduced.

OTHER CROPS

Wheat production for 1987 totaled 16.2 million bushels, up 81 percent from the previous year. Harvested acreage at 330,000 acres was up 22 percent from 1986 and yield per acre, at 49 bushels was up 16 bushels. The 1987 yield is the highest since records started in 1866. Logan County continued to be the main wheat county in Kentucky with 1.82 million bushels produced. Wheat condition was good coming into spring due to a mild winter with minimal winter kill. In spite of generally dry weather, some disease problems, and scattered lodging, wheat yields were very good Statewide. Wheat harvest started the second week of June and was virtually complete by the second week of July.

Kentucky hay production and harvested acreage were both up for 1987. All hay production for 1987 totaled 4.28 million tons, up 19 percent from a year earlier and the largest on record. All hay records started in 1909. Of the all hay production, alfalfa hay totaled 858,000 tons, while all other hay totaled 3.42 million tons. Alfalfa hay production was up 5 percent from 1986, while all other hay was up 23 percent. Alfalfa hay yielded 3.30 tons per acre and all other hay yielded 1.80 per acre.

Hay fields showed good growth in early spring. Alfalfa weevil populations also increased rapidly and some farmers harvested their hay early to limit weevil damage. First cutting of hay was actively underway by the second week of May and yields were generally good. Later cuttings were limited in many areas by moisture supplies available.

Grain sorghum production fell to 1.82 million bushels last year. This is a decrease of 57 percent from 1986 and is the second year production has declined after reaching a record high 11.4 million bushels in 1985. Harvested acreage decreased from 57,000 acres in 1986 to 26,000 acres in 1987. Yield was also down, averaging 70 bushels per acre compared to 75 bushels a year earlier.

Barley production increased 40 percent to 737,000 bushels in 1987. Acres harvested at 11,000 was down while a yield of 67 bushels established a record high. Oats and rye production were both up from last year. Most of the acreage sown to these two crops is used for a cover crop.

APPLES AND PEACHES

Utilized production of commercial apples in Kentucky totaled 16.5 million pounds in 1987, more than 4 times the amount produced in 1986. Price per pound averaged 15.3 cents, down from the 20.8 cents received in 1986. The total value of all utilized production for 1987 amounted to $2,523,000, compared to $810,000 in 1986. U.S. utilized apple production totaled 10.24 billion pounds in 1987, up 30 percent from the previous year's crop, but average price per pound decreased from 13.4 to 8.5 cents.

Utilized peach production in Kentucky totaled 8.9 million pounds in 1987, compared to 2 million pounds in 1986. Though overall production was up in Kentucky, some localities suffered a loss due to freezing rain in late March/early April. Prices averaged 24.5 cents per pound compared to 20.4 cents in 1986. U.S. utilized peach production totaled 2.30 billion pounds in 1987, up 3 percent from previous year, while the average price per pound decreased slightly from 14.6 to 14.2 cents.

1/ No significant commercial production due to frost.

WEATHER CROP SUMMARY - 1987

The coldest temperature for 1987 was minus 15 degrees recorded on January 27 at Manchester. Despite that cold spell and another at the beginning of the month, overall temperatures averaged only slightly below normal. Precipitation, at 1.85 inches, was over 2 inches below average for most areas of the State. Eastern Kentucky recorded the first significant snowfall of the winter where some locations received almost 6 inches of snow between the 24th and 26th. Most field activities from the 1986 crop were completed and farmers were doing normal winter chores.

During February, a large portion of Kentucky received ice and snow between the 16th and 18th. Some areas were without electricity with South Central dairy operators experiencing the most difficulties. A widespread rainfall at the end of the month brought the average precipitation for the month to slightly above normal. Temperatures were 2.5 degrees above normal for the State. The mild weather allowed producers to begin some early plowing, tobacco plant bed preparation, grass seeding, and liming/fertilizing.

The unseasonably mild temperatures continued into March with the monthly average of 48 degrees being 2.5 degrees above normal. Precipitation for the month was 1.87 inches below the normal of 4.97 inches. The warm, dry conditions allowed farmers to make rapid progress with early spring fieldwork activities. Most of Kentucky's fall-seeded crops, pastures, and livestock came out of the winter season in good condition. Tobacco plant bed preparation and seeding progress at the end of the month was the most advanced since 1974.

April began with a combination of rain and snow falling across the State. Total amounts received ranged from heavy in the West to very heavy in the East. Although precipitation was received throughout the month, total moisture was 1.08 inches below normal. Temperatures varied widely during the month ranging from a high of 92 degrees to a low of 14 degrees with the average being 2.8 degrees below normal. Some damage to fruit trees occurred because of the freezing temperatures early in the month. By the end of the month, some producers were behind their normal schedule for spring fieldwork due to the snow and below average temperatures.

Soils dried out during May as rainfall was 1.58 inches below the normal of 4.34 inches. Although some producers were making rapid progress in crop planting, others in drier areas were having to delay any further fieldwork because of the lack of moisture. Soil moisture conditions were rated as 87 percent short by producers at the end of the month. Temperatures were very mild, averaging almost 5 degrees above normal. The final freezing temperature of the season for the State was recorded at Ashland on the 7th.

Warmer than normal conditions continued through June with the temperature averaging 74.8, 2.1 degrees higher than normal. Temperatures topped at 100 degrees for the month on the 14th at Gilbertsville and Paducah. Rainfall was nearly 3/4 inch below normal for the month. A few corn producers had to replant fields where germination had been affected by the dry conditions. Many tobacco growers had to reset fields where plants had died from the dry, warm conditions. Pasture conditions also began to deteriorate from the lack of moisture.

Widespread rain and thunderstorms occurred across the State in the first half of July providing some relief to the dry conditions. The thunderstorms were accompanied by high winds and caused considerable damage to the north central portion of the State, while other areas reported some flooding, wind damage, and power outages. The second half of the month turned hot and muggy with precipitation limited to scattered thundershowers. Temperatures averaged almost 1 degree above normal, while moisture totals were normal for the month. Some early maturing tobacco was being cut by the end of the month.

Hot and humid conditions continued into August with the high temperature of the year of 104 degrees recorded at Gilbertsville and Lovelaceville on the 4th. Field crops were under heat and moisture stress with pasture conditions declining rapidly. Some livestock producers were having to supplement feed with hay. Rainfall for the month was 0.9 inch below normal.Precipitation totals varied from 7.91 inches in Somerset to 0.27 inch in Henderson. Tobacco that had been cut and hung in barns was drying very rapidly.

Although early September remained hot, a break in the temperatures came by the middle of the month. For the month, temperatures averaged 69.1 degrees, down 0.7 degree from normal. In spite of the break in temperatures, moisture conditions did not improve. Statewide, only 2.26 inches of rain was received which was 1.25 inches below normal. With the dry conditions, corn harvest made rapid progress while harvest of some early planted soybeans began.

October began with a cold Canadian air mass settling over Kentucky sending fall temperatures on the 4th below freezing for the first time. Temperatures for the month averaged 5.5 degrees below normal, while precipitation was 1.99 inches below normal. The State received 0.6 inch of rainfall during the month, ranging from a high of 1.58 inches in Paducah to none in Jeremiah. Inadequate moisture continued to cause problems for producers by delaying tobacco stripping and fall seedings.

Warmer than normal temperatures occurred during November. Precipitation continued to be below normal for the 9th straight month. The dry weather was favorable to continue fall crop harvesting; however, the humidity was too low for good burley stripping conditions. Although the Tobacco Market opened on the 23rd, producers needed higher humidity levels to put their tobacco in proper order for marketing.

Weather conditions for December were warm and wet compared to season norms. Precipitation averaged 6.37 inches, 2.34 inches above normal, making it the wettest month of the year. Moisture amounts varied from 10.05 inches in Lovelaceville to 3.12 inches in Warsaw. The first measurable snowfall of the season was recorded across the State on the 14th. Temperatures averaged 2.4 degrees above the normal of 37.4 degrees.

KENTUCKY WHEAT VARIETIES

Caldwell was the leading wheat variety seeded in the fall of 1986 for 1987 wheat production. Caldwell accounted for 34.9 percent of the seeded acreage, up from 8.8 three years earlier. Coker 916, which ranked 15th in 1984, was second in 1987 with 7.0 percent of the acreage seeded. Tyler, which ranked number one in 1984, slipped to third place in 1987. Compton tied Tyler for third with 6.1 percent of the wheat seeded and Arthur, which was second in 1984, slipped into fifth place in 1987. A total of 14.0 percent was reported as unknown variety under either soft or hard. Much of this unknown acreage was cover crop and not wheat for grain.

Among the top four varieties, Coker 916 had the highest reported average yield of 59.6 bushels per acre. Compton averaged 52.6 bushels per acre, while Caldwell averaged 52.0 bushels per acre and Tyler averaged 50.2 bushels per acre. Wheat yields for 1987 were the highest on record with top fields for some varieties yielding around 80 bushels per acre.

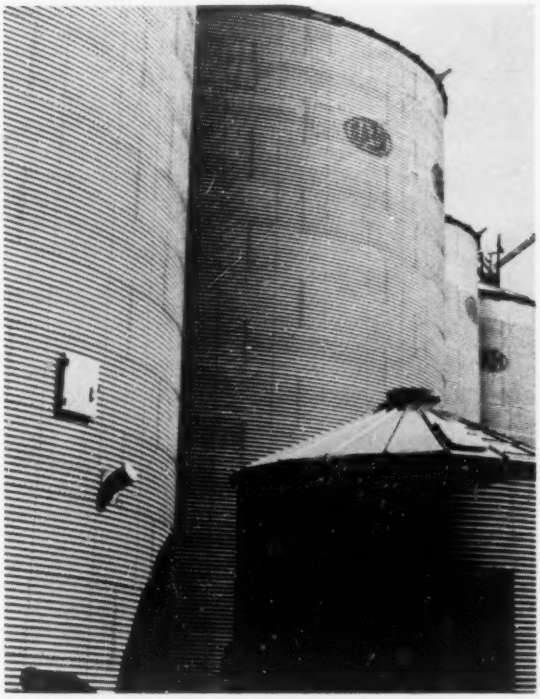
P-Dec. 1 previous year. *-No estimate published during this quarter.

OFF-FARM GRAIN STORAGE CAPACITY

Capacity of off-farm commercial grain storage in the Nation totaled 9.61 billion bushels on December 1, 1987. This is an increase of 5 percent from the December 1, 1986 estimate. Expansions in capacity since December 1, 1986 occurred in 30 States and 13 States registered declines. Illinois ranked number one in total storage capacity followed by Iowa, Kansas, Texas and Nebraska. These five States together accounted for 53 percent of the Nation's off-farm grain storage capacity. With an off-farm storage capacity of 71.42 million bushels, Kentucky ranked 25th among the States reporting capacity.

State capacity data includes all elevators, warehouses, terminals, merchant mills, other storage and oilseed crushers which store grain, soybeans, sunflower seeds, or flaxseed.



NUMBER AND CAPACITY OF OFF-FARM STORAGE FACILITIES
SELECTED STATES, DECEMBER 1, 1986 & DECEMBER 1, 1987

STATE	Number of Facilities 1/		Rated Off-Farm Storage Capacity	
	12-1-86 Revised	12-1-87	12-1-86 Revised	12-1-87
			1,000 Bushels	
Illinois	1,300	1,290	1,149,320	1,225,600
Indiana	709	665	358,400	390,820
KENTUCKY	265	257	68,920	71,420
Missouri	612	610	279,450	292,000
Ohio	640	613	318,400	346,420
Tennessee	297	290	69,830	72,440
UNITED STATES	14,046	13,873	9,123,280	9,607,770

1/Data users are advised that some differences may exist between States in the procedure for making counts of facilities in the grain storage universe. In a few instances, the count includes only the headquarters which reports for more than one facility. This does not affect data on total capacity.

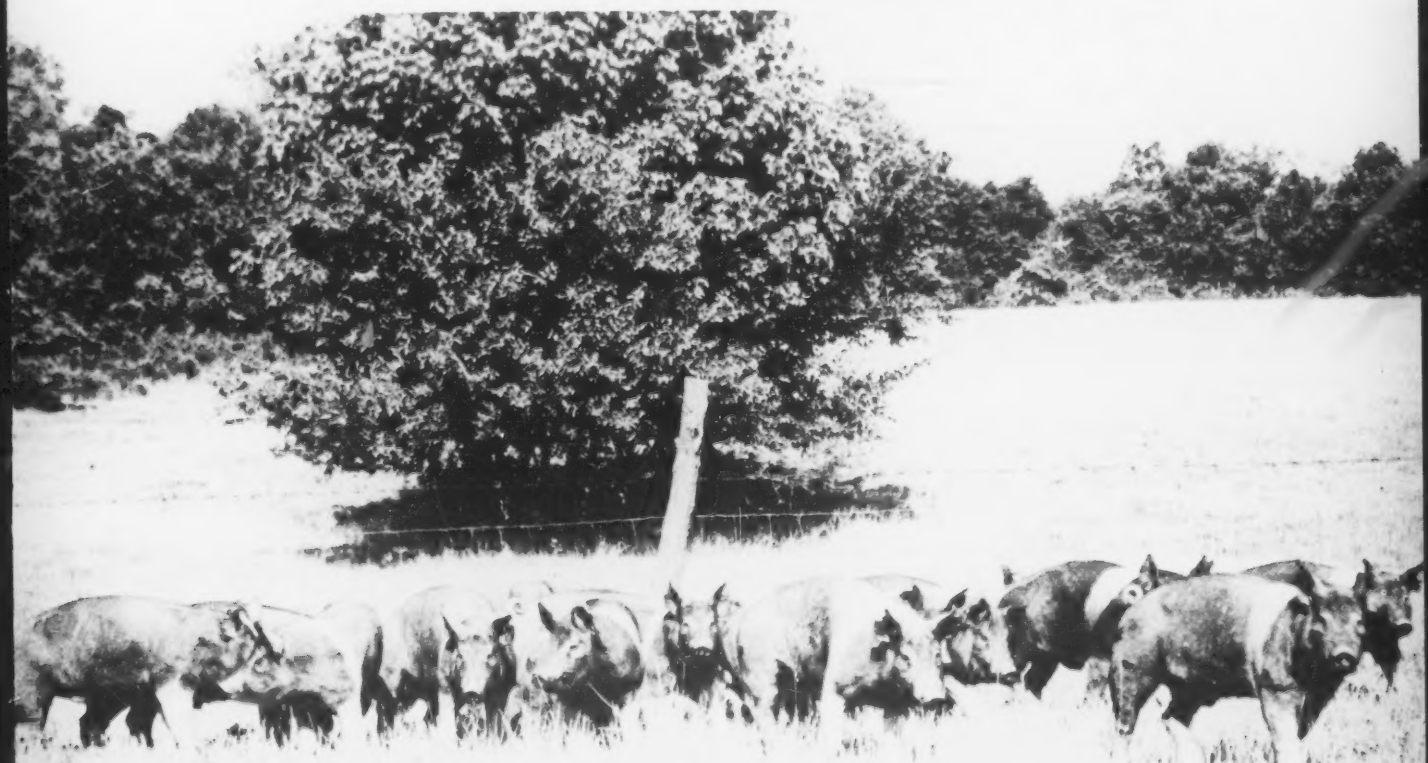
LIVESTOCK



LIVESTOCK HIGHLIGHTS

CATTLE AND CALVES

Kentucky's cattle and calf inventory totaled 2.45 million head on January 1, 1988, unchanged from the January 1987 total. Until this year, cattle numbers had declined every year since 1983.

The number of all cows was set at 1,235,000 head on January 1, 1988, up 1 percent from last year. Beef cow inventory climbed 2 percent from the previous year to 1,017,000 head, while dairy cow numbers dropped 2 percent to 218,000, the lowest number since 1868. Producers indicated they were holding 149,000 beef replacement heifers and 77,000 milk replacement heifers, up 2 and 3 percent respectively from the January 1987 totals. Steers on hand dropped 10 percent from last year to 220,000 head, while the number of calves on hand was virtually unchanged from last January at 600,000 head. The 1987 calf crop was slightly below the 1986 level, at 1.15 million head. Cattle on grain feed for slaughter was unchanged from last year at 25,000.

Total value of all cattle and calves for Kentucky was 1.16 billion dollars on January 1, 1988, 25 percent above year earlier levels. Cash receipts from marketings totaled $467.8 million in 1987, 18 percent above both 1985 and 1986. Increases in average value per head more than offset a 4 percent decline in liveweight marketed.

HOGS AND PIGS

The December 1, 1987 inventory of all hogs and pigs on Kentucky farms was 900,000 head, 2 percent above the previous year. Breeding inventory rose 4 percent to 135,000 head, while market hog inventory, at 765,000 head, climbed 2 percent from year earlier levels. A total of 109,000 sows farrowed during the December 1986-May 1987 period, while 105,000 sows farrowed during June-November. Average pigs saved per litter was 7.5, producing a 1987 pig crop of 1.6 million, 6 percent above 1986. Cash receipts to producers totaled $180.2 million, up 16 percent from the previous year. Pounds marketed rose 13 percent, and average price per hundredweight increased 4 percent compared with 1986.

SHEEP AND LAMBS

Sheep and lamb inventory was placed at 34,000 head on January 1, 1988, 6 percent above the previous year and the highest level since 1975. Ewes one year and older jumped 13 percent from 1987 to 27,000 head, while the 1987 lamb crop, at 27,000 head, was up 17 percent. Cash receipts jumped 53 percent from 1986 to $1.68 million as pounds marketed climbed 46 percent and average prices climbed 10 percent for lambs, and 15 percent for sheep.

POULTRY

The December 1, 1987 inventory of all chickens (excluding broilers) housed by Kentucky farmers numbered 2.60 million birds, up 13 percent from a year earlier. Hens and pullets of laying age totaled 1.94 million, up 7 percent from December 1986. Chicken flocks in the State produced 466.0 million eggs during 1987, an 11 percent increase from the previous year. Producers received $19.5 million from the sale of eggs, up slightly from 1986 as a 5.1 cent decline in average price nearly offset the increase in egg production. Average price received per dozen for 1987 was 50.3 cents compared with 55.4 cents in 1986. Broiler production for 1987 totaled 2.89 million birds, 4 percent below 1986. Broiler production was valued at $3.28 million, 21 percent below the 1986 level.

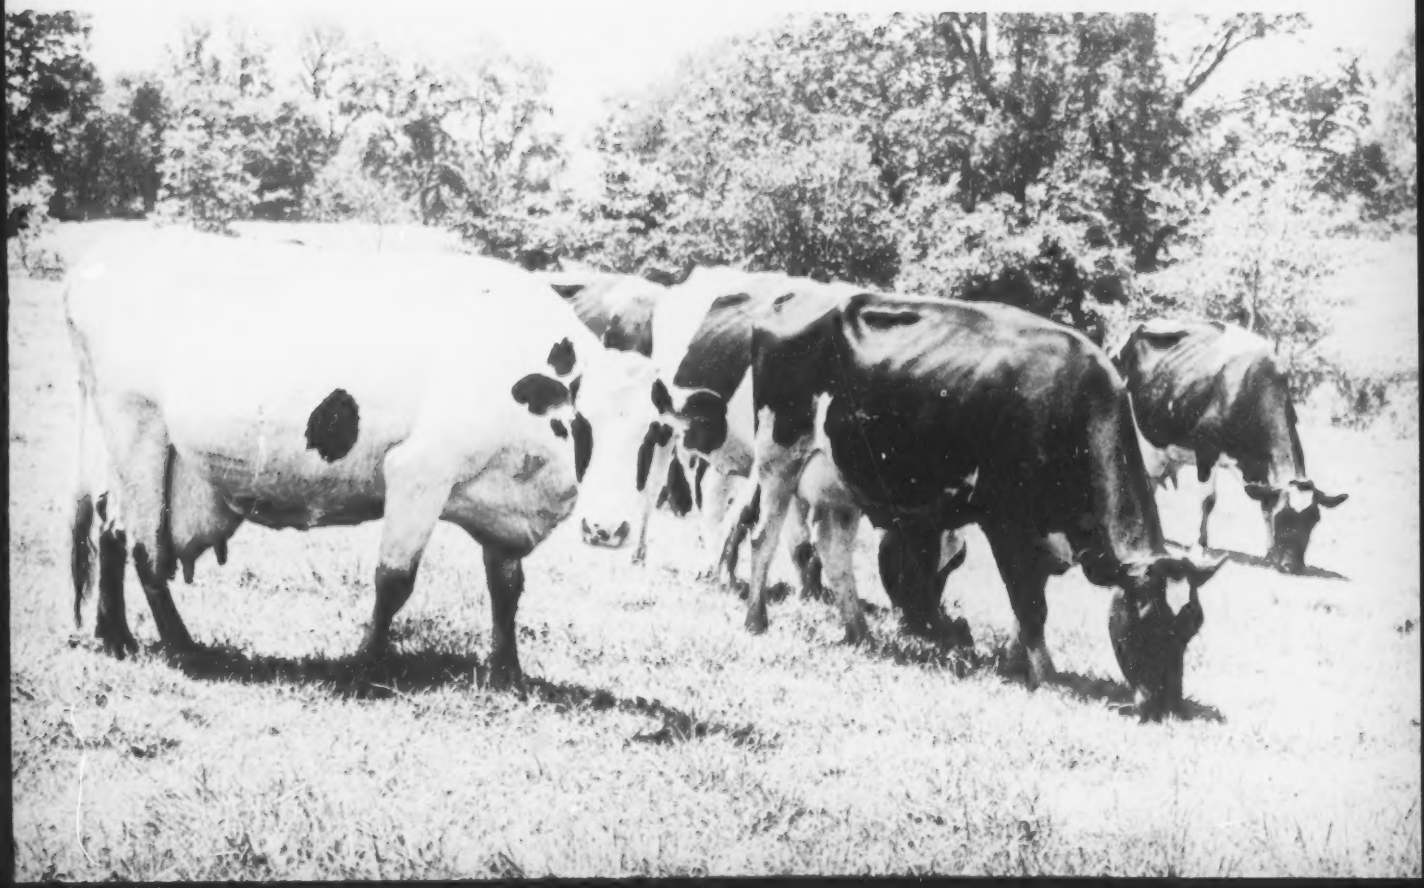
DAIRY



DAIRY HIGHLIGHTS

MILK COWS AND MILK PRODUCTION

Kentucky farms had a yearly average of 218,000 milk cows during 1987, down from 227,000 in 1986. The average annual production per cow was 10,725 pounds, up 474 pounds from the 1986 average. Total 1987 milk production at 2.34 billion pounds, increased marginally from the 1986 level. The average number of farms with milk cows was 7,500 during 1987, down 500 from 1986.

Kentucky's milk cows were fed 562,000 tons of feed and other concentrates in 1987, up one percent from 1986. This level averaged 5,150 pounds per cow or 48 pounds per cwt. of milk. In 1987 the average value of feed per cwt. was $7.12, down one percent from 1986 average of $7.17.

MILK DISPOSITION AND INCOME

Of the 2.34 billion pounds of milk produced during 1987, 2.24 billion pounds were sold to plants and dealers. The remaining 94 million pounds produced were used on farms as milk, cream and butter, and fed to calves and other livestock. Milk sold increased slightly and milk used on farms decreased 3 percent from 1986 levels.

The 2.24 billion pounds of milk marketed by Kentucky farmers consisted of 88 percent fluid grade milk and 12 percent manufacturing grade milk. Fluid grade deliveries during 1987 totaled 1.97 billion pounds, up 2 percent from 1986. Manufacturing grade milk marketings decreased 9 percent from 1986 levels to 270 million pounds in 1987.

The 2.34 billion pounds of milk produced by Kentucky farmers during 1987 was valued at $302 million, based on the average return per hundredweight of milk sold plus the value of on-farm consumption. The value of milk produced in 1986 was $293 million.

Values of fluid grade ($13.10/cwt.) and manufacturing grade milk ($11.00/cwt.) combined for an average price of $12.90 for all milk sold during 1987 by Kentucky farmers. The average price for 1986 was $12.60. Cash receipts from all dairy products marketed by Kentucky farmers in 1987 totaled $289.5 million, up from $281.0 million in 1986.

MANUFACTURED DAIRY PRODUCTS

Total cheese production, excluding cottage cheese, in Kentucky plants during 1987 was 44.9 million pounds. Production in 1986 was 52.7 million pounds. Seven plants manufactured 25.3 million pounds of American type cheese in 1987, compared to 34.3 million pounds in 1986.

Kentucky's 26 plants produced a wide variety of manufactured dairy products, including numerous types of cheese, butter, frozen products, dry milk products, whey products, and condensed and evaporated milk. To avoid disclosure of individual plant production, State figures for these commodities are not published.

2/ - Excludes milk sucked by calves.
3/ - Rounded sum of individual states.

FARM INCOME

1987 FARM INCOME HIGHLIGHTS

CASH RECEIPTS

Kentucky farm products sold during 1987 generated cash receipts of $2.42 billion, up less than 1 percent from 1986. Livestock and livestock products accounted for 62.3 percent of the total with crop sales making up 37.7 percent.

Livestock cash receipts in 1987 totaled $1.51 billion, up 11 percent from 1986. All livestock categories except broilers and chickens showed increases over 1986. Horse sales and stud fees totaled $540 million in 1987, up 8 percent from 1986. Horse receipts made up 22 percent of the total cash receipts, making it the leading commodity sold in Kentucky. Cattle and calves placed second in total receipts, accounting for 19 percent of the total. Sheep and lamb receipts showed the largest increase from 1986, up 53 percent.

Crop cash receipts totaled $912.9 million in 1987, down 12 percent from 1986. Tobacco receipts, valued at $441 million, accounted for 18 percent of the total making it the third leading agricultural commodity sold in Kentucky and number one crop commodity sold. Soybeans, with receipts of $161.6 million, accounted for 7 percent of the total and was down 9 percent from 1986. Corn was number three in crop cash receipts with receipts of $148.0 million. Wheat receipts valued at $33.9 million showed the largest gain over 1986 with a 63 percent increase.

PRICES RECEIVED BY KENTUCKY FARMERS

Prices received by agricultural producers in Kentucky were generally higher in 1987 when compared to previous year. Corn, for the preliminary 1987 market year, averaged $1.95, up 26 cents from the 1986 market year average. Wheat prices averaged $2.50, up 5 cents from 1986, while soybeans were up 73 cents to $5.70 per bushel. The 1987 market year for corn and soybeans runs from September 1987 through August 1988 and higher prices the last quarter will raise this average price. The market year average for hay in 1987 was equal to 1986. Burley tobacco for the 1987 marketing season averaged $1.572 per pound, virtually the same as 1986. The dark tobacco prices averaged one penny lower to 16 cents higher than the 1986 averages.

Annual average prices for cattle in 1987 were the highest since 1980 and averaged significantly higher than 1986. Cows averaged $40.80 for 1987, $6.90 per hundredweight higher than 1986. Steers and heifers weighing over 500 pounds were up $12.10 from the 1986 average and had the highest yearly average in eight years. Calves under 500 pounds averaged $73.90 in 1987, $16.60 above the 1986 average. Milk cows averaged $840.00 per head, their highest level since 1983. Milk prices increased moderately during 1987, up 10 cents per hundredweight for manufacturing grade and 20 cents for fluid grade. Hog prices were up in 1987 to $51.80, $1.80 above 1986 and had the highest market year average since 1982. Egg prices averaged 50.3 cents per dozen, down 5.1 cents from 1986.

PRICES PAID BY KENTUCKY FARMERS

The trends in prices paid by U. S. farmers for materials used in agricultural production were mixed in 1987. Prices paid for farm and motor supplies were mostly lower, while prices for farm machinery, chemicals, and building materials were mostly higher. Prices for gasoline, diesel fuel, motor oils, and grease were mostly lower in 1987, while increases occurred in batteries and spark plugs. Feed prices were mixed with items like soybean meal, molasses, stock salt, beef cattle supplements, and hog feeds up, while dairy feeds and corn meal were down. Farm machinery prices were mostly higher with the exception of items like manure spreaders, disks, and 5-bottom plows.

Building materials were generally higher priced. Exceptions were lower prices paid for house paint, half inch plywood and asphalt shingles. Prices for fencing materials, baler twine, shovels and hammers were lower, while adjustable end wrenches, grease guns, metal pails and pitchforks were higher.

KENTUCKY CROP VALUES - 1987

The value of crops produced by Kentucky farmers in 1987 totaled $1.17 billion, up less than 1 percent from a year earlier. Increased prices for tobacco, corn and soybeans could not compensate for lower production and as a result the value of these products decreased. Hay, wheat and fruit, however, posted increased value of production.

The big five crops - tobacco, hay, corn, soybeans and wheat - accounted for 99 percent of the total value of all crops raised by Kentucky farmers in 1987. Taken as a group, the value of these five crops is virtually unchanged from a year earlier. Tobacco continued to be the number one crop in Kentucky, even though total crop value fell slightly from 42 percent in 1986 to 41 percent in 1987. Kentucky's tobacco crop accounted for 25 percent of the total U. S. tobacco value, down from 28 percent in 1986. Hay moved up to number two in value of production with 23 percent of total crop value. Corn dropped to the number three slot with 20 percent of the total. Soybeans and wheat continue to be ranked fourth and fifth respectively. Apple and peach production were both substantially more valuable than a year earlier. Nationally, the leading crops in terms of value of production were corn, soybeans, hay, wheat, cotton and tobacco. As a combined group, the value of production of these crops increased 9 percent for 1987.

- Indicates less than .05%. Percent may not be accurate to .1 in last place because of method of machine computation. 1/Revised. 2/Preliminary. 3/Includes stud fees. 4/Forest products no longer included in farm cash receipts, but are included in net farm income.

CASH RECEIPTS BY COUNTY - 1987

Five counties in Kentucky generated cash receipts from marketings of over $50 million each during 1987. Fayette County is again the cash receipts leader with $256 million. Horse sales generated over 90 percent of total receipts with horse, livestock, and dairy sales producing $241 million in 1987. Bourbon County ranks second in cash receipts at $123 million with horse sales contributing over 75 percent of total receipts. Woodford, Shelby and Barren Counties also had cash receipts of over $50 million. Cash receipts from these five counties totaled $592 million, or nearly 25 percent of Kentucky's total cash income from farm marketings during 1987.

Sales of horses and mules generated $540 million in cash income during 1987, and was Kentucky's largest cash commodity. Cattle and calf sales totaled $468 million and was the second largest income producer. Tobacco ranked third with $441 million.

The five leading counties for livestock cash receipts were Fayette, Bourbon, Woodford, Scott, and Shelby. These counties accounted for 35 percent of the State's livestock cash receipts. Horse sales provided the majority of cash receipt totals in all of the top 5 counties, except Shelby, where dairy products were the cash income leader. Horse sales generated 36 percent of the total livestock cash receipts with cattle and calves second, at 31 percent, and dairy products third, with 19 percent.

The top five counties for crop receipts included Daviess, Logan, Christian, Graves, and Henderson. These counties produced 15 percent of the State's receipts from crop marketings. Soybeans were the leading commodity in Daviess, Henderson, and Logan Counties, with tobacco the number one commodity in Christian and Graves Counties.

Tobacco continues to be the leading income producer for crops, at $441 million or 48 percent of the crop total. Soybeans ranks second, with $162 million, or 18 percent of the total, while corn ranked third, with $148 million, or 16 percent of the total. For individual commodities, the leaders were:

Tobacco - Barren	Horses - Fayette
Corn - Union	Cattle - Barren
Soybeans - Daviess	Dairy - Barren
All Hay - Barren	Hogs - Union

COST OF PRODUCTION

FARM PRODUCTION EXPENDITURES

UNITED STATES

Farm production expenditures totaled $110.1 billion in 1987, up 3.9 percent from $106.0 billion in 1986. Expenditures were higher for all major categories except feed which decreased 0.5 percent, interest which dropped 15 percent, and fuels and lubricants which decreased 7.3 percent. Farm services including rent, the largest 1987 expenditures by farmers at $24.0 billion, accounted for 22 percent of the Nation's production expenses. This level was 2.9 percent above 1986. Average expenditures per farm were $50,791, an increase of $2,815 from 1986.

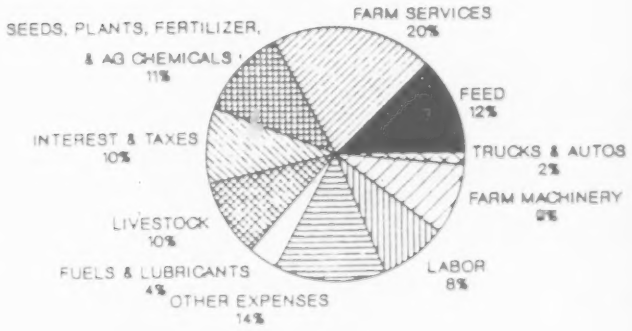
The Corn Belt region had the largest total expenditure, accounting for 23 percent of the U.S. expenses, followed by the Northern Plains region with 13 percent. Eight of the ten production regions had increased expenditures from a year earlier. Only the Southern Plains and the Northern Plains expenditures declined.

Farms in the over $100,000 sales category accounted for 67 percent of the total U.S. expenditures. The $40,000-$99,999 category was 17 percent of the total and farms with less than $40,000 sales, 16 percent. The three major expenditure categories of farm services, feed, and labor accounted for 46 percent of the total expenses for operations with sales over $100,000. For farms with sales between $40,000-$99,999 and those less than $40,000, the three leading expenses were farm services, feed, and farm machinery.

APPALACHIAN REGION

1987 farm production expenditures totaled $7.6 billion for the Appalachian Region, 12 percent above the $6.8 billion in 1986. The Appalachian Region accounted for 6.9 percent of the U.S. expenditures. The average expenditure per farm in the Appalachian Region was $22,533 - up $2,408 from a year earlier. Expenditures for this Region averaged less than half of the National average of $50,791. Farm services, feed purchases, livestock/poultry purchases and labor were the greatest expense items and accounted for over half of all expenses in 1987.

1987 MAJOR FARM EXPENDITURES AS A PERCENT OF TOTAL



1/Appalachian: KY, NC, TN, VA, WV. 2/Excludes Alaska & Hawaii. 3/Total expenditures divided by official number of farms published by NASS. 4/Totals may not add due to rounding. 5/Includes landlord expenditures. 6/Excludes veterinary supplies; bedding, litter, straw, & etc; purchase of capital equipment; other non-capitalized equipment for livestock & poultry; & custom feeding of livestock on a per head or gain basis & grazing fees for livestock. Includes purchases & leasing expenses for all other livestock & livestock products (eggs, wool, milk & leasing of livestock). 7/Includes custom feeding of livestock on a per head or gain basis & grazing fees for livestock. 8/Includes veterinary supplies. 9/Includes: tractors, other farm machinery, self-propelled machinery, fertilizer & irrigation equipment, trucks, autos, & other motor vehicles (leased or rented). 10/Excludes telephone & water, but includes irrigation water cost. 11/Excludes seed treatment. 12/Includes materials & applications. 13/Includes bedding, litter, straw & etc.; other non-capitalized equipment for livestock & poultry. Excludes power farm shop equipment & motor supplies. 14/Includes repair & maintenance of livestock & poultry equipment & motor supplies. 15/Includes other motor vehicles purchased. 16/Includes purchase of capital equipment for livestock & poultry. 17/Includes power farm shop equipment. 18/Excludes bedding plants, nursery stocks & seed purchased for resale. 19/Includes seed treatment. 20/Excludes other motor vehicles purchased.

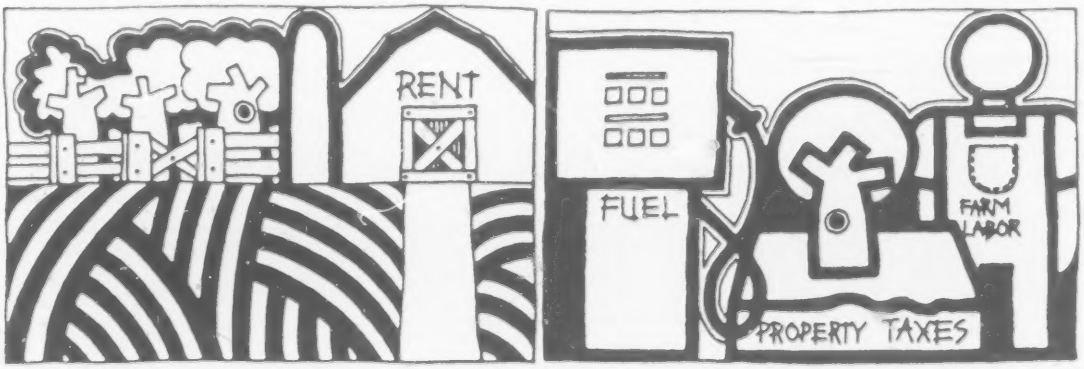
Definitions and data sources for 1978 and later are not directly comparable with those of earlier years. 4/Uses different data sources for periods before 1979, 1979-1983, and 1984 and later. Estimates are not directly comparable among periods. 5/Includes operator households. May not add due to rounding. 6/Revised. 7/Preliminary.



1986 COST OF PRODUCTION

Cost of production estimates for the 1986 corn, soybeans and wheat crops show cash receipts well below production costs for all three commodities. The estimates assembled by USDA's Economic Research Service, reflect average costs reported in a survey of farm operators covering the 1986 crop. An individual's cost of production may vary considerably from these estimates depending on the structure of the individual's farm operation. For example, interest charges could be deleted if no money is borrowed for operating expenses or land charges could differ depending on encumbrance. Taxes, insurance, overhead and other items vary greatly from operation to operation. The operator's labor is included in unpaid labor costs and equipment depreciation is accounted for in capital equipment replacement costs. A closer estimate of an individual farm's costs of production can be determined by substituting the farm's actual costs for the estimates given in the tables. The University of Kentucky Cooperative Extension Service and county agents can assist farmers in developing cost of production budgets for their operations.

1986 CORN FOR GRAIN

Harvest-period Price ($/bushel)	$1.93
Yield (bushel/planted acre)	90.81 BU
Cash Receipts	$175.26

ITEM	COST PER ACRE	COST PER BUSHEL PRODUCED 1/
TOTAL VARIABLE COSTS:	119.49	1.32
Seed	15.87	.17
Fertilizer	57.37	.63
Lime & Gypsum	4.51	.05
Chemicals	12.15	.13
Custom Operations	5.24	.06
Fuel, Lube & Electricity	6.79	.07
Repairs	10.26	.11
Hired Labor	2.28	.03
Drying	4.83	.05
Technical Services	.19	.01

General Farm Overhead	7.20	.23
Taxes & Insurance	5.35	.17
Interest	10.96	.35
TOTAL OTHER COSTS:	82.12	2.63
Land Charge	41.29	1.32
Capital Equipment Replacement	22.96	.74
Unpaid Labor	12.73	.41
Return to Operating Capital	1.62	.05
Return to Other Non-land Capital	3.52	.11
TOTAL COSTS (Variable, Fixed & Other)	173.92	5.57

1986 WHEAT

Harvest-period Price ($/bushel)	$2.50
Yield (bushel/planted acre)	20.25 BU
Cash Receipts	$56.54 2/

ITEM	COST PER ACRE	COST PER BUSHEL PRODUCED 1/
TOTAL VARIABLE COSTS:	64.02	3.16
Seed	10.22	.50
Fertilizer	33.97	1.68
Lime & Gypsum	2.25	.11
Chemicals	.78	.04
Custom Operations	6.31	.31
Fuel, Lube & Electricity	3.83	.19
Repairs	5.25	.26
Hired Labor	.80	.04
Miscellaneous	.31	.02
Technical Services	.31	.02
TOTAL FIXED COSTS:	18.18	.90
General Farm Overhead	5.36	.26
Taxes & Insurance	4.66	.23
Interest	8.16	.40
TOTAL OTHER COSTS:	48.27	2.38
Land Charge	14.72	.73
Capital Equipment Replacement	19.11	.94
Unpaid Labor	9.15	.45
Return to Operating Capital	2.17	.11
Return to Other Non-land Capital	3.12	.15
TOTAL COSTS (Variable, Fixed & Other)	130.47	6.44

1/Derived by dividing cost per acre by average yield. 2/ Includes income from sale of straw. Note: Totals may not add due to rounding.

PRICES PAID BY FARMERS FOR COMMODITIES USED IN PRODUCTION, UNITED STATES 1977, 1986, AND 1987

Commodity and Unit	Annual Average Price 1/ 1977	1986	1987
	(Dollars)		
FEED:			
Laying Feed, complete ration, per ton	152.00	175.00	169.00
Mixed Dairy Feed, per ton, 16% protein	140.00	162.00	154.00
Mixed Hog Feed, per cwt.			
14 - 18% protein	8.53	9.32	8.70
38 - 42% protein	13.50	13.10	13.80
Beef Cattle Concentrate, per cwt.			
32 - 36% protein or over	9.20	10.80	10.90
Bran, per cwt.	7.50	9.24	8.79
Middlings, per cwt.	7.37	8.33	7.61
Corn Meal, per cwt.	5.74	6.61	6.03
Soybean Meal, per cwt., 44% protein	12.90	11.30	11.90
Cottonseed Meal, per cwt., 41% protein	11.40	11.80	12.90
Molasses, per cwt. (liquid)	5.65	8.38	8.90
Stock Salt, per cwt.	3.51	6.51	6.58
MOTOR SUPPLIES, EQUIPMENT AND SERVICE:			
Gasoline, regular, per gal., including taxes			
Service Station (unleaded starting 1978)	.61	.97	.94
Bulk Delivery (leaded)	.57	.94	.92
Diesel Fuel, per gal.	.45	.76	.71
Motor Oil, regular (non-detergent), per gal.	2.17	4.32	4.29
Motor Oil, heavy duty (detergent), per gal.	2.56	4.69	4.58
Motor Oil, all weather (high-detergent), per gal.	2.95	4.96	4.79
Grease, per 35-pound pail	15.20	31.90	31.60
Grease, per 14 1/2-ounce cartridge	.60	1.15	1.16
Auto Tires, each			
Bias-belted, E78 x 14	NA	42.50	41.40
Truck Tires, 7.50-16, load range, each 2/	46.40	73.40	73.20
Tractor Tires, rear, 18.4-38, 6 ply, each 2/	280.00	406.00	395.00
Storage Batteries			
12 volts, 220 - 310 amps, each	37.00	47.20	48.20
12 volts, 315 - 500 amps, each	46.50	58.30	58.50
Spark Plugs, each	1.39	1.73	1.78
Antifreeze, permanent, per gal.	4.20	4.10	4.00
Oil Filter, spin-on type, each	4.00	4.60	4.60
Reline Brakes, (Ford, Chevrolet, Plymouth)	58.40	101.00	105.00
Motor Tune-Up, (Ford, chevrolet, Plymouth) Labor Only	15.40	26.90	29.00

1/Annual Average Prices are straight rather than weighted averages. 2/Beginning 1985, 7.50-16 load range replaced 7.00-15 6 ply. Beginning 1985, 18.4-38, 6 ply rating replaced 18.4-34, 6 ply. NA = Not Available.

PRICES PAID BY FARMERS FOR COMMODITIES USED IN PRODUCTION, UNITED STATES 1977, 1986, AND 1987

Commodity and Unit	Annual Average Price 1/ 1977	1986	1987
		(Dollars)	
BUILDING MATERIALS:			
Lumber, per 1,000 board ft.			
2" x 4" Pine, standard and better	307.00	350.00	372.00
2" x 4" Fir, standard and better	346.00	382.00	391.00
Rough Boards, for farm fences and construction	371.00	489.00	501.00
Dressed Boards, 1" Pine, S4S standard and better or No. 2 and better	436.00	653.00	682.00
Asphalt Shingles, mineral surface, approx. 240 lbs. per square	21.70	25.30 2/	23.60 2/
Galvanized Steel Roofing 28-29 ga., per 100 sq. ft.	32.10	41.20	41.40

Malathion, per 5 gal.	14.00 4/	88.90	91.80
Treflan, per 5 gal.	25.70 4/	125.00	126.00
Dual, per gal.	NA	48.40	48.20

1/Annual Average Prices are straight rather than weighted averages. 2/Disk Harrow, tandem, 15-17 ft., with transport wheel and hydraulic lift, less tires. 3/Price per pound prior to 1978. 4/Price per gallon prior to 1978. NA = Not Available.

MISCELLANEOUS

FARM NUMBERS HIGHLIGHTS

The number of farms in Kentucky in 1988 is estimated at 99,000, the same level as in 1987. This is the lowest level on record, but still ranks the Commonwealth fourth Nationally. The only States with more farms than Kentucky are Texas (156,000), Missouri (113,000), and Iowa (107,000). A farm is defined as a place that sells or could sell $1,000 of agricultural products during the year. Land in Kentucky farms has remained stable at 14.5 million acres since 1982. The approximate total land area of Kentucky is 25.4 million acres, therefore, land in farms accounts for 57 percent of the total. The 1988 average farm size in Kentucky is 146 acres.

Farm numbers in the United States in 1988, estimated at 2.16 million, are down 1 percent from the 2.18 million in 1987. Total land in farms for 1988 is estimated at 999 million acres, a decrease of less than 1 percent from a year earlier. Land in farms has declined every year since reaching its peak of 1.21 billion acres in 1954. The average farm size in the United States increased to 463 acres, up 2 acres from 1987.

BEES AND HONEY

Honey production in the United States during 1987 for producers with 5 or more hives totaled 227 million pounds (103 thousand metric tons), up 13 percent from 1986. There were 3.19 million colonies producing the honey, down slightly from 1986. Colonies that produced honey in more than one State were counted in each State, and calculated yield would therefore be reduced. Yield per colony averaged 71.1 pounds, up from 62.5 pounds in 1986. Stocks were 33.1 million pounds or 14.6 percent of production.

Prices for the 1987 honey crop averaged 50.7 cents per pound, down 0.4 cents from the 1986 price of 51.1 cents per pound. Prices are based on sales to private processors and co-ops, and on retail sales by producers. Higher prices for the amber honeys reflect the larger proportion of retail sales relative to the white honey class. All government payments and loans are excluded from the honey prices published in this report.

Kentucky honey production during 1987 totaled 350,000 pounds, 56 percent above 1986. Yield per colony at 25 pounds was 10 pounds above last year. Stocks on hand at 147,000 pounds were up 71 percent from 1986.

1/Data collected by Division of Regulatory Services, Agricultural Experiment Station, Lexington, Kentucky. Fertilizer sold as straight materials and miscellaneous products based on tonnage reports from manufacturers. 2/Includes superphosphate and triple superphosphate. 3/Includes minor nutrients, filler when reported separately & other fertilizers of unspecified composition.

FARM EXPORTS

U.S. agricultural export value and volume rose 20 percent during the first 5 months of Fiscal Year (FY) 1988 (October 1987-February 1988). This followed an increase of 6 percent in value of FY 1987 agricultural exports. The value of agricultural exports for FY 1987 totaled 27.9 billion dollars up from the 26.3 in 1986; however, 1987 was well below the record high 43.8 billion in 1981.

Soybeans and products led U.S. exports followed by feed grains and products. FY 1987 export shipments abroad increased for soybeans, cotton, livestock products, and fruits and vegetables.

Japan was the top market for U.S. agricultural exports for the last 5 fiscal years. Other top markets included Netherlands, Canada, South Korea, USSR, Mexico, Taiwan, and West Germany.

Kentucky exports for FY 1987 totaled $649.9 million, down slightly from the $666.9 million for FY 1986. Tobacco, live animals, and soybean products were the leading agricultural export commodities from Kentucky. Kentucky ranked number two in tobacco exports and number 4 for live animals (including horses).

California led the Nation in value of agricultural exports with $2.84 billion. Fruits, vegetables, and nuts were leading commodities. Iowa ranked second with $2.26 billion followed by Illinois with $2.12 billion. Nebraska, Texas, Kansas, Minnesota, and Indiana all had over one billion dollars worth of agricultural products exported in FY 1987.

COUNTY SUMMARY

COUNTY DATA

The following section highlights each county in Kentucky. Crops produced, livestock inventories, milk production and agricultural cash receipts are displayed with the appropriate rank among all counties. Data published here are available elsewhere in this bulletin, but this should aid data users interested in certain counties. Also, included for each county are the most current agricultural census data (1982) for number of farms, land in farms and harvested cropland acres.

Below is a table with data for the entire State. On succeeding pages each county is listed alphabetically. If you have any questions on this section, please get in touch with us.

STATISTICAL REPORTS PROGRAM

In addition to this Annual Bulletin the Kentucky Agricultural Statistics Service publishes timely estimates on crop and livestock production, prices and various other special reports. A list of the more important reports and the approximate date of release is shown in the table below. Many of these reports are combined and republished in the twice-monthly Kentucky AGRI-NEWS. Due to budget restraints, there is a minimal charge for the AGRI-NEWS and Crop-Weather for non-reporters. Current reporters may receive these reports without charge. These reports may be obtained from the Kentucky Agricultural Statistics Service, P.O. Box 1120, Louisville, Kentucky 40201. PHONE: (502) 582-5293.

TYPE OF REPORT	FREQUENCY OF REPORT	APPROXIMATE DATE AVAILABLE
I. CROP REPORTS		
1. Intentions to Plant	Annually	March 31
2. Production of Field Crops & Fruits	Monthly (In Season)	10th - 12th
3. Grain Stocks	Quarterly	Jan 15; Mar 31; Jun 30; Sep 30
